500 AMP DC SHUNT

Part Number: 3415

INSTALLATION AND OPERATING INSTRUCTIONS

INTRODUCTION

The 3415 500 Amp DC Current Shunt is designed to measure DC currents of -500A to +500A and provide a voltage output that can be measured on a suitably equipped Oceanic Systems measuring device such as the 3410.

SAFETY INSTRUCTIONS

This unit should only be installed by a person competent and experienced in working on electrical systems on boats. Before beginning work the battery should be disconnected to avoid the risk of a short circuit, a fire or an explosion. Before drilling any holes to mount the unit or run the cabling always make sure it is safe to do so.

LOCATION AND INSTALLATION

The power cable to be measured should be attached in series to each of the two large bolts on the top of the shunt. Be sure that these connections are clean and secure to achieve the best accuracy. A signal cable should be connected to the two small screws on the face of the unit and be connected to a suitable measuring device such as the 3410. The signal cable should be run to the 3410 making sure that it is supported and protected between the two devices. Please note that the signal cable should be run directly between the two devices with any excess length trimmed for security.

CALIBRATION & SETUP

The module requires no calibration.
